SUMMARY

MPhil graduate in Computer Science from Quaid-e-Azam University, Islamabad, with thesis on Information Exploration techniques for social multimedia content, in field of Human Computer Interaction. Experience in creative writing, academic writing, and basic illustrations.

EDUCATION

MPhil-CS
Quaid e Azam university, Islamabad
2022-25, Thesis score: 83/100 (Grade A);
Overall CGPA: 3.5

Bachelors in Computer Science
Fatima Jinnah Women University
2017-21, CGPA 3.19 (80 %)
Electives: Digital Image Processing, Data Science, Software Project Management tools, Computer Vision, Parallel and Distributed Computing, Mobile and Wireless networks
Final Year Project:
Web based Design and Analysis Tool for Digital Logic Circuits

Intermediate
FSC Pre-medical from F.G Post Graduate College for Women, Wah Cantt (2014-16), A1 gr*ade*

Matriculation
POF model high school Gadwal, Wah Cantt (2014), A1 Gr*ade*

SKILLS

Academic research,

creative writing and content writing,

Python backend development, Django framework,

Illustrations (*Inkscape/ Adobe Illustrator/ MS PowerPoint*

Presentations template design/ formatting

Documentation tools: Microsoft Word, Overleaf/ Latex

Microsoft office tools: PowerPoint, Word, Excel

Search Engine Optimization

ADDITIONAL COURSES (*certified*)

Creative writing

Graphic design

Search Engine Optimization (SEO)

Data Analytics and Business Intelligence

Platform: Digiskills.pk

Theory of Graphic Design by Udemy

INTERESTS

Creative writing,
Back-end development,
problem solving,
Design/ minimalistic design, Reading,
philosophy, Behavioral Sciences,
patterns

Design/ minimalistic design,
Reading,
interdisciplinary research,
Illustrations,
Calligraphic drawings,
Poetry

Languages:

English (proficient),
Urdu (native),
Pashto (native)

ABOUT THESIS

"Aggregated Social Multimedia Content Exploration Framework" aims to enhance the exploration of social multimedia contents through a non-linear exploration mechanism. The framework is based on an interactive Search User Interface (SUI), instantiated on graph-based clustering technique. Variants of the classic Zahn's method for graph-based. non-linear clustering approach were implemented and evaluated based on relevance judgement feedback. The proposed approach produces promising results, with overall ratings in upper positive range.

Supervisor: Dr. Umer Rashid (CS Dpt.)
